                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Best Local Similarity
                                                                                                                                                                                                                                                                                                                                        AAW10696 and AAW10697 are internal peptides of the beta subunit of tomato polygalacturonase isoform 1 (PG1). The two peptides were generated by digestion with Lys-C and Gly-C endoproteases respectively. The peptides were used for the design of degenerate PCR primers used for CDNA library screening. A cDNA molecule encoding PG1 was identified, this sequence was used to produce constructs, antisense to the PG1 coding sequence, which are used to transform a tomato plant cell so as to reduce or eliminate PG1 activity. There are two isoforms of tomato polygalacturonase (PG), PG1 and PG2. PG1 has a much higher heat stability level (usually at least by 20 deg. C.) than PG2. By reducing or eliminating PG1 expression, leaving the less heat-tolerant isoform PG2. The process for production of tomato pastes, sauces etc. becomes less costly due to a lower temperature being needed for PG breakdown. A higher viscosity is also produced due to increased soluble pectin content. (Updated on 25-MAR-2003 to correct PF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Transgenic tomato plants with low level of polygalacturonase isoform 1 have higher content of soluble pectin(s) and require less heat energy teliminate polygalacturonase activity of the fruit.
                                                                                                                                                                                                                                                                Sequence 10

                                                                                                                                                                                                                                                                                                                                        The present sequence represents an internal fragment of the tomato CC polygalacturonase beta-subunit. The specification describes a CC polygalacturonase beta-subunit promoter. The promoter exhibits both high CC expression and high specificity, and provides tissue-preferential and CC developmentally regulated expression. The beta-subunit promoter is highly CC active in developing tomato fruit from as early as 10 days after CC pollination upto the onset of ripening, at which time it becomes CC inactive. The fruit specific, developmentally regulated promoter, can CC control the expression of target genes which affect the quality of CC developing fruit without affecting the ripening process. Target genes include genes responsible for sugar or starch metabolism, source sink CC relation, organic acid balance, flavour components, pathogen resistance, CC soluble solids, and water/pH relations. All or part of the promoter may be used to direct the expression of foreign or endogenous genes in the sense orientation, or in the antisense orientation, for overexpression or
                                                                                                                          Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention provides a new method for modifying pectin that involves providing a host having pectin methylesterase (PME) activity and polygalacturonase (PG) activity, transforming the host by silencing PG activity to provide an increased PME to PG ratio, preparing a PME extract from the transformed host, and using the PME extract to modify pectin. A PME modified pectin is useful for foodstuffs preparation, and to impart an increased functionality to food products such as yogurt, milk/fruit juice and whey drinks. PME is useful to reduce the number of ester groups in a pectin in a high-ratio manner and to descript, which were the products in the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of the product of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Modifying pectin, for foodstuffs preparation, involves transforming host having pectin methylesterase (PME) and polygalacturonase (PG) activity by silencing PG activity, to increase PME to PG ratio.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WO200078982-A1

cellulase protein.

Cellulase; fusion construct; protein synthesis; papermaking; glyceraldehyde phosphate dehydrogenase; food industry; feed washing composition; catalyst.

```
metabolite by a fungus. This involves modulating the expression of at CC least one ZBC (zinc binuclear cluster protein) gene in a manner to CC improve the yield of the secondary metabolite. Methods of the invention CC may be used for improving the production of the secondary metabolite e.g. CC antibacterial (such as beta-lactam), an anti-hypercholesterolaemic (such as lovastin or mevastatin), an immunosuppressant (such as cyclosporin A), CC an ergot alkaloid (such as ergotamine), an angiogenesis inhibitor (such as ovalicin), a glucan synthase inhibitor, gliotoxin family of compounds, CC a fungal toxin, a modulator of cell surface receptor signalling, a plant CC growth regulator, a pigment, an insecticide, or an antinepplastic CC compound. The method results in a decrease in fermentor run-time, a CC decrease in the size of the secondary metabolite, or an antinepplastic CC compounds. The method results in a decrease in fermentor run-time, a CC equivalent amounts of the secondary metabolite, or an antinepplastic CC waste that must be handled in downstream processing. The sequences given in records ABP3557-ABP35722 represent ZBC proteins. Note: The sequence CC data for this patent did not form part of the printed specification, but fig. wispo.int/pub/published_pot_sequences

                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                            CC This invention describes a novel microorganism (A) of the genus Ashbya CC for biotechnical production of proteins (I), containing a genetic CC construct so that the protein-synthesis capacity is altered relative to CC the wild-type species A. gossypii ATCC 10895. The invention also CC describes (1) cellulase gene (IIa), for use in (A), having a sequence, CC from Streptomyces halstedii; (2) promoter (P) and transcriptional CC terminator (TI) from the sequence encoding the glyceraldehyde phosphate CC dehydrogenase of A. gossypii; (3) genetic structure containing (IIa) plus cregulatory regions that provide expression in Ashbya; (4) a vector CC containing (IIa), P and/or TT, or the structure of (3), plus signals that provide replication in host cells or integration into a cellular genome; (5) transformed Ashbya, for production of cellulase, containing the gene copy producing (A) by exchanging the promoter and/or increasing the gene copy contacture of (3) in replicable form; (6) producing gene; and (8) (I) produced by the method of (6). (A) are used for recombinant production of cellulase, useful in comparanking, medicine, food/feed industries, washing compositions and/or cascatalysts. (A) provide higher protein yields than wild-type cells. CC in the construction of the A. gossypii/S. halstedii genetic construct cused to illustrate the method of the invention. (Updated on 06-AUG-2003 CC correct OS field.)

The enzyme is capable of hydrolysing beta-1,4-glycosidic linkages in the interior of a cellulose molecule, converting the cellulose to glucose. The C-terminal region of the enzyme is crucial for activity; deletion of 12 amino acids from that end results in loss of all activity. Recombinant endoglucanase can be expressed in host cells, esp. E. coli, utilising vectors incorporating the cenA gene. (Updated on 25-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid genes from Drosophila and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 427 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to

Decreasing the expression or activity of native MLO protein leads to enhanced resistance of plants against pathogens such as fungi, vivus, nematodes and insects. Mlo gene can be used to isolate related sequences from other plants and as molecular markers used in breeding programs aimed at improving disease resistance. MLO protein has anti-infective, antipathogenic, antiviral,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is the maize MLO5 (ZmMLO5) protein, which exhibits sequence homology to barley MLO1 (HvMLO1) sequence. MLO5 protein is encoded by a mutation-induced recessive allele MLO5, located on chromosome 3, that confers resistance to plant pathogens. Expression of native MlO genes in plants can be altered by transforming them with a DY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 149
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Creating or enhancing disease resistance in resistance genes expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0
```

The invention relates to an isolated nucleic capable of detecting 1000 or more genes from

acid detection reagent Drosophila. The invent

invention

z:

Disclosure; SEQ ID NO 10272; 21pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher entaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB5737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIFO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                   The invention relates to an isolated polynucleotide that encodes nacrein. The methods and compositions of the present invention are useful for pearl oyster cultivation and pearl formation. The present sequence represents the amino acid sequence of Pinctada maxima nacrein.
                                                                                                                                                                                                                   Sequence 568 AA;
                                                                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page 24-25; 29pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynucleotide and polypeptide from the nacre gene of the Pinctada margaritifera species, useful for pearl cyster cultivation.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid genes from Drosophila and interactions.
                         Staphylococcus aureus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI;

                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for identifying a compound (1) that inhibits binding of TSAP (Tumour Suppressor Activated Pathway) 6 to a TSAP6 binding protein. The present sequence is one such TSAP6 binding protein. (1) are useful for modulating tumour reversal and/or apoptosis

                                                                                                                                                                                                                                                                       The invention relates to multiprotein complexes from eukaryotes. Proteins of the invention and DNA sequences encoding them are given in records ABR52568-ABR53903 and ACC60610-ACC61944 respectively. The complexes are obtainable by using a protein as a bait and isolating the set of proteins which is attached thereto from cells. Such protein complexes may comprise up to 30 distinct proteins. Protein complexes of the invention are useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, preferably a drug target in the treatment or prevention of a disease or disorder. Note: The sequence data for this patent is not represented in the printed specification, but is based on sequence information supplied by the European Patent Office. The complete document is available on CD-ROM
                                                                                                                                                                                                                                        Sequence 175 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; SEQ ID NO 151; 17pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated protein complexes useful for diagnosing a disease or disorder, or as a target for an active agent of a pharmaceutical, protein a drug target in the treatment or prevention of disease

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                      Biol.
        PUNCTION: The biological conversion of cellulose to glucose generally requires three types of hydrolytic enzymes: (1) Endoglucanases which cut internal beta-1,4-glucosidic bonds; Exocellobiohydrolases that cut the dissaccharide cellobiose from the nonreducing end of the cellulose polymer chain; (3) Beta-1,4-glucosidases which hydrolyze the cellobiose and othe short cello-oligosaccharides to glucose.

CATALYTIC ACTIVITY: Endohydrolysis of 1,4-beta-D-glucosidic linkages in cellulose, lichenin and cereal beta-D-glucoans.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CATALYTIC ACTIVITY: ATP = 3',5'-cyclic AMP + diphosphate. COFACTOR: Binds 2 magnesium ions per subunit (By similarity). ENZYME REGULATION: Activated by calcium/calmodulin and G protein. SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Mushroom bodies of the fly brain.
DOMAIN: Composed of two homologous domains.
SIMILARRITY: Belongs to the adenylyl cyclase class-4/guanylyl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cyclase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 memory defect.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
